TOPIC 4 · CREATE MICROSOFT 365 AGENTS FOR BUSINESSES
LAB 14 THEME · GOVERNED SHARING AND ENABLEMENT

Lab 14 — Share with Named Users and Deliver the Staff Enablement Plan

Maps to	LO4: design a staff training plan for Microsoft Loop and Copilot Studio while configuring, testing and sharing a bounded Microsoft 365 business agent.
Duration	30 minutes
Tools	Microsoft 365 Copilot Agent Builder · SharePoint or OneDrive · Microsoft Loop · Word · Excel
Mock data	data/Northstar_Work_Orders.xlsx, data/knowledge/Northstar_Maintenance_Policy.docx, data/knowledge/Northstar_Verified_Snapshot.docx, data/knowledge/Northstar_Work_Orders.xlsx, data/knowledge/Northstar_Staff_Enablement_Plan.docx, data/knowledge/Northstar_Knowledge_Inventory.csv, data/knowledge/Northstar_Agent_Owner_Config_Register.csv
Lab files	data/templates/Northstar_Staff_Enablement_Plan.md (Staff training plan); data/templates/Northstar_Agent_Test_Matrix.csv (Sharing gate)
Course	Enhance Work Productivity with Microsoft 365 Copilot (TGS-2024043856) · v9.0
Prompts	https://tertiarycourses.github.io/TGS-2024043856-Enhance-Work-Productivity-with-Microsoft-365-Copilot/prompts/#lab-14

Goal

Named-user sharing record, test-user result, Loop enablement component and rollback-ready owner plan.

What You Will Do

Share only after blocking tests pass. Verify named users already have source access, retest acquisition and retrieval, then use Microsoft Loop for staff training evidence.

What You Will Build

Named-user sharing record, test-user result, Loop enablement component and rollback-ready owner plan.

Prerequisites

- Microsoft 365 account with Copilot available in Word, Excel, PowerPoint and Outlook. Availability depends on the assigned licence and tenant settings; confirm access with the trainer before class.
- Desktop Excel on Windows or Mac is recommended; save working copies to your assigned OneDrive course folder with AutoSave on. Do not overwrite the supplied input.
- Download this whole lab folder. All files are synthetic; Northstar-v9 is your own learner output folder.
- Microsoft 365 Copilot Agent Builder access in the assigned tenant. Availability depends on licence and admin policy; use the supplied configuration-and-test route when unavailable.

Data note

Northstar Water Services is fictional. Use the verified 120-row baseline and fixed reporting date 30 September 2026. Current assignments are evidence; proposals are not approved. Agent labs use retrieval, configuration, testing and supported sharing only; they never claim external-service actions.

Steps

Step 1. Confirm every blocking test passes. Assign agent owner, knowledge owner, supervisor and support roles.

Step 2. Open Share and review user versus owner roles. Start with one named test user or approved group.

Step 3. Verify that the user already has permission to each SharePoint or OneDrive source. Do not broaden permissions for the exercise.

Step 4. Share the link with the named training test user only. If sharing is unavailable, finish the plan without claiming distribution. The user runs T01, T05 and T06.

Step 5. Create a Microsoft Loop rollout tracker using only observed results.

PROMPT / CHECK — copy and adapt

```
MICROSOFT LOOP COPILOT:
Create a Northstar agent staff enablement tracker with columns User, Role, Practice test,
Evidence, Defect, Owner, Retest and Status. Include grounded retrieval, UNKNOWN, permission
and external-action-refusal tests. Do not fabricate completion or approval.
```

Step 6. Review the plan: purpose, access, four practice cases, escalation, owner, monthly review and rollback. Keep the approved LO4 focus on Microsoft Loop and Copilot Studio training.

Step 7. Record final private or named-user state, actual link if available, test result and next review. Do not submit to an org catalog or multi-channel deployment.

Sample Prompts

Use the app labelled for each prompt (or adapt it). Name the table and columns, state the output, and always verify the result. Use the linked prompts web page for one-click Copy buttons.

Copy-ready prompts: https://tertiarycourses.github.io/TGS-2024043856-Enhance-Work-Productivity-with-Microsoft-365-Copilot/prompts/#lab-14

#	Purpose	Prompt
1	Share	After T01-T08 pass, share the Northstar Operations Agent with one named test user who already has source access; record user and owner roles.
2	Enable	Create a Microsoft Loop tracker with User, Role, Practice test, Evidence, Defect, Owner, Retest and Status; do not prefill completion.

Test It

Check	Expected result
Gate	All blocking retrieval, permission and action-boundary tests pass.
Sharing	Named users only; role and knowledge access verified.
Loop plan	Actual practice evidence, defect owner and retest visible.
Lifecycle	Owners, review trigger and rollback assigned.

Checkpoint

If you fell behind, use data/checkpoints/Northstar_Verified_Checkpoint.xlsx and data/checkpoints/Northstar_Verified_Snapshot.docx. Record checkpoint used in Prompt_Log; then perform this lab, rather than claiming the checkpoint as your output.

Troubleshooting

If this happens	Fix
Copilot cannot find the source	Use the app file picker to select the actual OneDrive file. A typed local path or a different app chat is not shared context. If needed copy only the verified snapshot into the current app.
A total disagrees with Control	Clear dashboard filters to All, check table extent and duplicate IDs, recalculate, then compare definitions and reporting date. Reconcile before continuing.
The named feature is missing	Confirm the correct assigned account, English display language and app version. Use the stated manual practice route; record feature unavailable. This is not evidence that a native skill ran.

Challenge

Run one additional adversarial prompt and explain which instruction or knowledge boundary controlled the response.

Reflection

Which evidence proves the output is correct, and which decision still needs a person?
