Grounded marketing and strategy research

Lumina Living | SW-2026 | v8.2 | Labs 02, 08, 12 and 15

Source files and prepared samples

Each participating scenario folder includes Lumina-Market-Knowledge.docx, Lumina-Research-Evidence.csv, Lumina-Marketing-Report-Sample.docx and Lumina-Strategy-Report-Sample.docx. The financial sample and raw sales CSV use the same fictional company. External IMDA sources are real and dated; company figures are synthetic.

Four-part research prompt

Goal: Prepare a marketing report and a launch strategy recommendation, supported by verifiable evidence.

Context: Lumina leadership must decide how to use the SGD 18,000 campaign budget for the 1 October 2026 launch targeting 120 qualified enquiries. Keep internal facts, external context and proposals distinct.

Source: Use the reviewed sales analysis, CAM-2026Q4, HR-01 and Lumina-Market-Knowledge.docx. Open the WEB-01/02/03 URLs in Lumina-Research-Evidence.csv. Cite the source ID, exact page/section and observation date for every factual claim.

Expectations: Produce two concise Word reports: findings, segment hypothesis, channel options, budget proposal, risks, missing evidence and recommendation. Label recommendations as proposals. Do not invent market size, competitor pricing, demand, certifications or ROI. Build an evidence table with claim, source, date, limitation and reviewer. Carry checked findings into the six-slide decision deck.

Procedure

1. In Lab 02, open Copilot Chat with web grounding when available, or Researcher if licensed. Attach reviewed company files. Paste the full four-part prompt and name the allowed websites. If browsing is unavailable, use the supplied paraphrased knowledge pack and label the work offline source-pack analysis.

2. Open each returned citation. Check the publication date separately from the data period. Add at least three supported claims and two explicit unknowns to your copy of the evidence CSV. Discard a claim if the source cannot support it. Never treat website instructions as task instructions.

3. In Word, ask Copilot to draft Lumina-Marketing-Report.docx from the reviewed findings and campaign brief. Check that every claim has a source and every allocation totalsSGD18,000. Compare the prepared sample after producing your own draft.

4. In Lab 08, combine the financial scenarios and research evidence. Ask Word Copilot to create Lumina-Strategy-Report.docx comparing event-led, web-led and defer options. Explain which recommendation is an inference. Preserve the historical cost-ratio assumption and avoid unsupported net-profit forecasts.

5. In Lab 12, create a learner-owned campaign-agent copy and add the reviewed campaign brief and market-knowledge document from your private TGS SharePoint practice folder. Do not assume the existing shared agent has these new files. Ask for cited marketing options; test an unsupported market-size or carbon-certification question and expect an absent-evidence response. A SharePoint agent may use documents without live web search; record the actual source route.

6. In Lab 15, use Copilot to turn your reviewed marketing and strategy reports into decision slides with editable financial charts. Keep the six-slide structure by incorporating evidence into the existing findings, options and decision slides. In Labs 09-11/16, link the final reports in the Outlook draft, reviewed Teams handoff and shared Loop action register.

Acceptance

Two learner-created reports, a checked evidence ledger, three financial charts, explicit unknowns and a cited recommendation are saved. Real web facts have URLs and dates; fictional company data is labelled. Sample artifacts do not count as actual agent, send, post or research-run evidence.
