Lab 14 Connect the recommendation to a reviewed action

Course: TGS-2024043856 | Version: v8.2 | Apps: Copilot Studio + Power Automate + Excel | Alignment: K4 | A4

Company and role

You work for Lumina Living Pte Ltd on SW-2026, the Sustainable Workspace Launch. HR, Marketing, Finance and Operations share one evidence trail. Launch is planned for 1 October 2026; budget SGD 18,000; target 120 qualified enquiries. Your role in this lab is Operations action control.

Input and handoff

Use Lumina-Routing-Test-Register.xlsx; Lumina-Service-Routing.docx. Prefer your prior-lab output. The scenario folder provides a supplied fallback so this lab can run independently. Save your work in your own SW-2026 folder and record whether you used your own output or a supplied example.

Use Lumina-Living-Lab-14.xlsx as the evidence workbook. completed/ contains comparison examples, not proof that your action ran. The primary app output is Lumina-Action-Run-Register.xlsx.

Four-part prompt

Goal: Pass a reviewed routing recommendation to a separately configured training flow. Validate required fields, require human review and record the returned item/run ID. If no flow is configured, record Not run rather than claiming success.

Context: You work for Lumina Living Pte Ltd on SW-2026, the Sustainable Workspace Launch. HR, Marketing, Finance and Operations share one evidence trail. Launch is planned for 1 October 2026; budget SGD 18,000; target 120 qualified enquiries.

Source: Lumina-Routing-Test-Register.xlsx; Lumina-Service-Routing.docx. Use your own reviewed prior-lab files first; scenario/ contains supplied fallback examples.

Expectations: Save Lumina-Action-Run-Register.xlsx. Record source version, verified facts, unresolved questions and reviewer in Lumina-Living-Lab-14.xlsx. Keep project SW-2026 and action IDs A01-A04 unchanged. Label every output Draft until reviewed; record actual app actions separately.

Procedure

1. Inspect the original controlled-action lab and the class's configured training flow, if one is available. Confirm its connection identity, target test list, required fields and approval stage.

2. Pass only a reviewed recommendation with REQ-101 and SW-2026. Test missing required input and verify no write occurs for the invalid case.

3. For a valid approved run, open the destination item and compare every stored field with the request. Record the real item ID and run result.

4. Without a configured flow, complete the design and validation evidence, mark execution Not run, and retain the recommendation for the capstone.

Acceptance and next handoff

The output belongs to Lumina SW-2026; the named sources support its facts; the reviewer and source version are recorded; and Lumina-Action-Run-Register.xlsx is available to the next activity. Check each step's numerical or behavioral expectation. A draft is not a sent email, a posted Teams message or an executed flow.

Use SHAREPOINT-AGENT-EXTENSION.pdf for the existing agent setup and source-access procedures. The shared policy agent uses EXP-01; HR policy testing requires your learner-owned agent with the reviewed HR source added.
