Lab 15 Integrate the analysis into a decision presentation

Course: TGS-2024043856 | Version: v8.2 | Apps: Microsoft 365 Copilot + Analyst + PowerPoint + Excel | Alignment: K4 | A4

Company and role

You work for Lumina Living Pte Ltd on SW-2026, the Sustainable Workspace Launch. HR, Marketing, Finance and Operations share one evidence trail. Launch is planned for 1 October 2026; budget SGD 18,000; target 120 qualified enquiries. Your role in this lab is Management decision pack.

Input and handoff

Use Lumina-Analysis.xlsx; Lumina-Management-Report.docx; Lumina-HR-Policy.docx; Lumina-Campaign-Brief.docx. Prefer your prior-lab output. The scenario folder provides a supplied fallback so this lab can run independently. Save your work in your own SW-2026 folder and record whether you used your own output or a supplied example.

Use Lumina-Living-Lab-15.xlsx as the evidence workbook. completed/ contains comparison examples, not proof that your action ran. The primary app output is Lumina-Decision-Deck.pptx.

Four-part prompt

Goal: Produce the final six-slide decision deck with three verified editable charts, policy/training implications, planned campaign figures, risks and A01-A04. Check every quantitative claim against the workbook and stop at Ready for Review.

Context: You work for Lumina Living Pte Ltd on SW-2026, the Sustainable Workspace Launch. HR, Marketing, Finance and Operations share one evidence trail. Launch is planned for 1 October 2026; budget SGD 18,000; target 120 qualified enquiries.

Source: Lumina-Analysis.xlsx; Lumina-Management-Report.docx; Lumina-HR-Policy.docx; Lumina-Campaign-Brief.docx. Use your own reviewed prior-lab files first; scenario/ contains supplied fallback examples.

Expectations: Save Lumina-Decision-Deck.pptx. Record source version, verified facts, unresolved questions and reviewer in Lumina-Living-Lab-15.xlsx. Keep project SW-2026 and action IDs A01-A04 unchanged. Label every output Draft until reviewed; record actual app actions separately.

Procedure

1. Open your verified analysis, management report, HR policy and campaign brief. Use example 3 for the presentation stage.

2. Generate or refine the six-slide decision deck. Replace all illustrative charts with your verified Excel data; retain editable chart objects in PowerPoint.

3. Compare every figure and date across Excel, Word and PowerPoint. Verify the planned budget/target and the historical period are distinct.

4. Require a named human review. Save the final Lumina-Decision-Deck.pptx and link it in the evidence register for Lab 16.

Acceptance and next handoff

The output belongs to Lumina SW-2026; the named sources support its facts; the reviewer and source version are recorded; and Lumina-Decision-Deck.pptx is available to the next activity. Check each step's numerical or behavioral expectation. A draft is not a sent email, a posted Teams message or an executed flow.

Use SHAREPOINT-AGENT-EXTENSION.pdf for the existing agent setup and source-access procedures. The shared policy agent uses EXP-01; HR policy testing requires your learner-owned agent with the reviewed HR source added.

Marketing and strategy handoff

Complete the corresponding steps in GROUNDED-RESEARCH.md, included in this folder. Use the local scenario source pack and prepared reports; save your own cited marketing/strategy outputs for the final deck and communication handoff.

Professional presentation with PowerPoint Copilot

Choose a financial-performance briefing or marketing-strategy proposal for Lumina leadership. Both use the same verified company evidence.

Goal: Create a professional six-slide executive presentation that supports a clear decision.

Context: Present to Lumina's HR, Marketing, Finance and Operations leads. Use a clean corporate style, consistent typography, restrained colours, generous white space and one main message per slide. Keep the October plan distinct from January-June actuals.

Source: Use your reviewed Lumina-Management-Report.docx, Lumina-Marketing-Report.docx, Lumina-Strategy-Report.docx and verified financial Excel charts. The scenario reports and Lumina-Decision-Deck.pptx are prepared comparison samples.

Expectations: Use six slides: decision headline; financial performance; channel or market evidence; options and assumptions; risks and readiness; recommendation with owners and dates. Include three editable financial charts, SGD units, source notes, concise bullets and speaker notes. Label inferred recommendations and unsupported questions. Do not fabricate figures, market research, logos or certifications.

1. Save the reviewed Word report in your accessible OneDrive/SharePoint practice folder. In PowerPoint, open Copilot and choose the available create-presentation/from-file experience. Select or reference the reviewed report, then supply the complete prompt above. If multiple files are unsupported, consolidate the reviewed evidence into one Word source first.

2. Review Copilot's outline before generating slides. Choose a suitable corporate theme and check that each slide has a clear purpose. Record the actual Copilot prompt and result in your lab workbook.

3. Generate the presentation. Use Copilot to refine overly dense slides and draft presenter notes. Verify every number, claim and citation against your source report; do not assume the generated deck is accurate.

4. Insert or replace charts with editable native Excel/PowerPoint charts using your checked monthly revenue/cost, actual-versus-target and channel-margin data. Test Edit Data. A screenshot is not an editable chart.

5. Run Slide Show and inspect alignment, chart labels, contrast, overflow and source-note readability. Check all six slides in the exported PDF. Save Lumina-Professional-Presentation.pptx and PDF; capture actual Copilot-use evidence.

6. Link the reviewed deck in the Outlook draft and Teams handoff; track review actions in Loop. The prepared sample deck illustrates an acceptable structure but does not count as your Copilot-generated submission.
