Lab 16 Deliver and monitor the complete Lumina workflow

Course: TGS-2024043856 | Version: v8.2 | Apps: Microsoft 365 Copilot agents + Outlook + Teams + Excel | Alignment: K1-K4 | A1-A4

Company and role

You work for Lumina Living Pte Ltd on SW-2026, the Sustainable Workspace Launch. HR, Marketing, Finance and Operations share one evidence trail. Launch is planned for 1 October 2026; budget SGD 18,000; target 120 qualified enquiries. Your role in this lab is Cross-department capstone.

Input and handoff

Use Lumina-HR-Policy.docx; Lumina-Analysis.xlsx; Lumina-Management-Report.docx; Lumina-Decision-Deck.pptx; Lumina-Loop-Tasks.csv. Prefer your prior-lab output. The scenario folder provides a supplied fallback so this lab can run independently. Save your work in your own SW-2026 folder and record whether you used your own output or a supplied example.

Use Lumina-Living-Lab-16.xlsx as the evidence workbook. completed/ contains comparison examples, not proof that your action ran. The primary app output is Lumina-Release-Evidence.xlsx.

Four-part prompt

Goal: Complete the handoff: review Word and Excel, approve the deck, save the Outlook draft, post a reviewed update in the training Teams channel, and monitor the same Loop actions. Record actual links, recipients, approvals and outcomes; do not mark unperformed actions complete.

Context: You work for Lumina Living Pte Ltd on SW-2026, the Sustainable Workspace Launch. HR, Marketing, Finance and Operations share one evidence trail. Launch is planned for 1 October 2026; budget SGD 18,000; target 120 qualified enquiries.

Source: Lumina-HR-Policy.docx; Lumina-Analysis.xlsx; Lumina-Management-Report.docx; Lumina-Decision-Deck.pptx; Lumina-Loop-Tasks.csv. Use your own reviewed prior-lab files first; scenario/ contains supplied fallback examples.

Expectations: Save Lumina-Release-Evidence.xlsx. Record source version, verified facts, unresolved questions and reviewer in Lumina-Living-Lab-16.xlsx. Keep project SW-2026 and action IDs A01-A04 unchanged. Label every output Draft until reviewed; record actual app actions separately.

Procedure

1. Collect the final HR policy, analysis workbook, management report, decision deck and four action records in one personal SW-2026 folder.

2. Run the policy, campaign and routing agent tests relevant to the package. Open source citations and record failures as well as passes.

3. Review and save the Outlook draft. Check the trainer-assigned recipients and links before any authorized manual send.

4. Review and post the Teams update in the assigned sandbox. Include the reviewed Word/PPT links and the same Loop component. Record the actual message link.

5. In Loop, retain A01-A04 and update statuses from actual evidence. Check one change through Teams and Outlook. Do not claim scheduled monitoring unless a real configured automation ran.

6. Complete a release record with source versions, reviewer, approval, draft/sent status, Teams post link, Loop URL and outstanding exceptions. Separate Draft, Reviewed, Sent/Posted and Verified states.

Acceptance and next handoff

The output belongs to Lumina SW-2026; the named sources support its facts; the reviewer and source version are recorded; and Lumina-Release-Evidence.xlsx is available to the next activity. Check each step's numerical or behavioral expectation. A draft is not a sent email, a posted Teams message or an executed flow.

Use SHAREPOINT-AGENT-EXTENSION.pdf for the existing agent setup and source-access procedures. The shared policy agent uses EXP-01; HR policy testing requires your learner-owned agent with the reviewed HR source added.

Include links to the reviewed Lumina-Marketing-Report.docx and Lumina-Strategy-Report.docx in this handoff. The scenario folder contains labelled samples if your own reports are unavailable. Keep report versions and action IDs consistent.

Live Lumina SharePoint site - use the assigned tenant account; anonymous Anyone links are unavailable.
