LAB 01

Set Up Microsoft 365 Copilot and Prompt Safely

Foundation · Microsoft 365 Copilot Chat + Excel · K1 · A1

Establish the licensed work surface, distinguish work from web grounding and record safe-use controls.

Files in this folder

- Start with Lumina-Living-Lab-01.xlsx and retain all outputs inside this lab folder.
- The completed/ subfolder is for comparison after your own attempt.

Primary prompt

Using the attached workbook and only the information it contains, summarise the three highest-priority readiness gaps for Lumina Living. For each gap, cite the sheet and row evidence, state the risk, propose one control, and label anything you cannot verify.

Detailed procedure

1. Sign in with the training account allocated by the trainer and confirm the Microsoft 365 Copilot work surface is available.

Do not paste the password into the workbook, prompt history or screenshots.

2. Open the workbook and review the Readiness_Register table.

Confirm that the fields Owner, Evidence, Risk and Control are present.

3. Select work-grounded context when available and attach the workbook.

If work grounding is unavailable, continue with the attached file and record the limitation.

4. Submit the supplied prompt without adding unsupported company facts.

PROMPT: Using the attached workbook and only the information it contains, summarise the three highest-priority readiness gaps for Lumina Living. For each gap, cite the sheet and row evidence, state the risk, propose one control, and label anything you cannot verify.

5. Verify every cited row and revise any unsupported statement.

Record Pass, Corrected or Not verifiable in Prompt_Review.

6. Save the workbook with your initials and retain one screenshot of the grounded response.

Use the Evidence_Register sheet; do not capture credentials.

Acceptance test

The register identifies the active Copilot surface, grounding source, three evidence-backed gaps and a verification status for every claim.

Evidence to retain

- Completed Excel workbook with prompt and evidence registers.
- App-specific output named in the expected result.
- A screenshot showing the final state without credentials.
- A short note explaining verification, exception and human approval.
