LAB 04

Build a PowerPoint Story from Word and Excel

Intermediate · PowerPoint + Word + Excel + Copilot · K1 · A1

Convert the approved brief and performance data into a decision-led presentation structure.

Files in this folder

- Start with Lumina-Living-Lab-04.xlsx and retain all outputs inside this lab folder.
- The completed/ subfolder is for comparison after your own attempt.

Primary prompt

Create an eight-slide leadership presentation for the Sustainable Workspace campaign using the attached project brief and workbook. Build a decision-led story: context, customer need, campaign idea, target audience, timeline, budget, risks and approval request. Use concise slide titles that state the takeaway. Do not invent numbers.

Detailed procedure

1. Review the Project_Brief and Presentation_Data workbook.

Complete the Evidence_Map before generating slides.

2. Open the supplied blank deck and confirm the 16:9 layout.

Retain the Lumina Living theme and footer.

3. Create an outline with Copilot.

PROMPT: Create an eight-slide leadership presentation for the Sustainable Workspace campaign using the attached project brief and workbook. Build a decision-led story: context, customer need, campaign idea, target audience, timeline, budget, risks and approval request. Use concise slide titles that state the takeaway. Do not invent numbers.

4. Review the outline before creating slides.

Every slide must answer why it matters or what decision is needed.

5. Generate the presentation and replace generic imagery with editable shapes or approved visuals.

Do not use decorative charts or unsupported statistics.

6. Check every number against the workbook.

Record slide number, source sheet and cell range in Evidence_Map.

7. Run a final accessibility and legibility check.

Check title size, contrast, alt text and reading order.

Acceptance test

The deck contains eight coherent slides, all quantitative claims trace to the workbook and the final slide asks for a specific decision.

Evidence to retain

- Completed Excel workbook with prompt and evidence registers.
- App-specific output named in the expected result.
- A screenshot showing the final state without credentials.
- A short note explaining verification, exception and human approval.
