LAB 06

Build and Audit Excel Formulas with Copilot

Foundation · Excel + Copilot · K3 · A2

Use Copilot to propose calculated columns while retaining formula transparency and controls.

Files in this folder

- Start with Lumina-Living-Lab-06.xlsx and retain all outputs inside this lab folder.
- The completed/ subfolder is for comparison after your own attempt.

Primary prompt

In the Campaign_Data table, propose formulas for Revenue, Margin, Margin_Percent, Conversion_Rate and Target_Status. Use structured references, make divisions zero-safe, and reference thresholds from the Assumptions sheet. Explain each formula and identify two edge cases to test before applying it.

Detailed procedure

1. Convert the Campaign_Data range to an Excel Table.

Name it tblCampaign and confirm one header row.

2. Inspect blanks, zeros and unexpected types.

Record exceptions before generating formulas.

3. Submit the formula prompt.

PROMPT: In the Campaign_Data table, propose formulas for Revenue, Margin, Margin_Percent, Conversion_Rate and Target_Status. Use structured references, make divisions zero-safe, and reference thresholds from the Assumptions sheet. Explain each formula and identify two edge cases to test before applying it.

4. Apply one formula at a time and inspect the full column.

Reject any formula with hardcoded thresholds or mismatched row references.

5. Test zero impressions, zero revenue and negative cost.

Use a copy of the test rows; do not corrupt the source table.

6. Create a Controls sheet.

Count blanks, formula errors, negative values and rows with Review status.

7. Save the audited workbook.

All controls must show PASS or an owned exception.

Acceptance test

All derived columns use auditable formulas, zero denominators are handled intentionally and the Controls sheet contains no unexplained errors.

Evidence to retain

- Completed Excel workbook with prompt and evidence registers.
- App-specific output named in the expected result.
- A screenshot showing the final state without credentials.
- A short note explaining verification, exception and human approval.
