LAB 09

Triage an Outlook Inbox and Draft a Controlled Reply

Intermediate · Outlook + Excel + Copilot · K2 · A3

Use Copilot to summarise, prioritise and draft without bypassing recipient and fact checks.

Files in this folder

- Start with Lumina-Living-Lab-09.xlsx and retain all outputs inside this lab folder.
- The completed/ subfolder is for comparison after your own attempt.

Primary prompt

Using the Inbox_Register and the selected email thread, produce: (1) a five-line summary, (2) decisions and unanswered questions, (3) priority with rationale, and (4) a draft reply that acknowledges the issue, answers only supported points, assigns next actions and requests missing information. Do not send. Flag any recipient, date or attachment that requires verification.

Detailed procedure

1. Open the Inbox_Register and review the priority rules.

Confirm VIP, deadline, risk and dependency fields.

2. Select one supplied thread in Outlook or the lab message pack.

Do not use a live personal mailbox for this exercise.

3. Generate a thread summary.

PROMPT: Using the Inbox_Register and the selected email thread, produce: (1) a five-line summary, (2) decisions and unanswered questions, (3) priority with rationale, and (4) a draft reply that acknowledges the issue, answers only supported points, assigns next actions and requests missing information. Do not send. Flag any recipient, date or attachment that requires verification.

4. Verify people, dates, commitments and attachment names.

Record each check in Draft_QA.

5. Refine tone for the recipient.

PROMPT: Make the reply concise, constructive and accountable. Preserve all verified facts and open questions.

6. Run the human-send gate.

Check To, Cc, subject, commitments, confidentiality and attachments.

7. Save the draft without sending.

Record Draft ready and the approver in the workbook.

Acceptance test

The draft remains unsent, all facts and recipients are checked, and the triage register shows priority, owner and next action.

Evidence to retain

- Completed Excel workbook with prompt and evidence registers.
- App-specific output named in the expected result.
- A screenshot showing the final state without credentials.
- A short note explaining verification, exception and human approval.
